

## Endorsement

Consistent with the program management and systems architecture role of the Goddard Space Flight Center (GSFC) in the formulation and implementation of the Living with a Star (LWS) program, the GSFC will provide the human resources and institutional support to execute the program commensurate with the NASA LWS research and development budget.

The plan outlined herein defines the scope of the LWS program based on pre-formulation studies. Technical and resource requirements will be developed in FY 2001 during LWS program formulation and the POP-01-1 budget process, and will be reflected in the Final Program Plan.

The GSFC looks forward to the program management, systems architecture development, and execution of the LWS program in fulfilling its responsibility for Sun-Earth Connection (SEC) theme management for the Office of Space Science (OSS).
